## 1.1 Problem Statement

In ServiceNow, sensitive student and institution records need to be protected from unauthorized access. The project aims to control access based on user roles and the Branch field, allowing authorized users to access EEE records while administrators have full access.

## 1.2 Brainstorming

- Create users with different roles.
- Create an Institution Details table.
- Use ACLs for access control.
- Restrict records based on the Branch field.
- Create separate ACLs for Read, Create, Write, and Delete.
- Give administrators full access.
