3. PROJECT DESIGN PHASE

Title	Script-Controlled ACL – Restrict Record Access Based on Field Value
Team ID	SWTID-2026-8230
Team Lead	RANJEETHA R
Team Member	SELVI P

3.1 Problem Solution Fit

The problem of unauthorized access is addressed by combining user roles, ACLs, and field-based conditions. Separate ACLs control Read, Create, Write, and Delete operations.

3.2 Proposed Solution

The proposed solution is a Script-Controlled Access Control System in ServiceNow. An Institution Details table is protected using roles such as bb1, bb2, bb3, and bb4. ACLs control different operations, while the Read ACL restricts access to EEE branch records.

3.3 Solution Architecture

User → ServiceNow Authentication → User & Role Management → ACL → Role/Condition Evaluation → Institution Details Table → Access Decision.
